Senior Data Analyst

Experienced as a BI engineer serving IT Executive Leadership. Advanced skills in SQL, Python, Power BI, and Tableau. Most valuable finding opportunities for new solutions, storytelling with data, working closely across many teams, and developing with self-service/UX focus. Looking forward to using experience "running IT as a business" in new, compelling arenas.

Highlights from the Last 2 Years

Technical Initiative

First in org to build and launch a production AI chatbot for the purpose of conversational analytics.

Data Design

Converted dense dashboards into clean, intuitive UI infographics. Making complex data into effective insights.

Business Acumen

Built the OKR framework from strategy to data visualization, that IT leadership uses to run IT as a business.

Professional Experience

Qualcomm

2017 - 2026 | San Diego, CA

Senior Systems Analyst

2021 - 2026

- End-to-End ownership 4 enterprise-grade Power BI workbooks (100+ monthly views) and 50+ dashboards and reports, translating complex, multi-source datasets into actionable insights for CIO-level and cross-functional stakeholders across IT, Finance, Procurement, and HR
- Delivered strategic recommendations informing decisions across \$1B+ in annual IT spend, 50K+ vendors, and a workforce of 1,400+ employees
- Built pipelines using SQL, Python, and Power Query to optimize workbook performance and extract, transform, and load (ETL/ELT) leveraging a wide stack including AWS Redshift, dbt, on-prem Oracle, Informatica, and Databricks
- Advanced use of DAX and Python to transform data post ETL/ELT
- Harnessed interest in UX/UI design by creating and owning BI team's design standards (.pbit, Figma ...)
- Owned and maintained data models including semantic layers in Power BI/Microsoft Fabric
- Established and enforced data quality standards and governance frameworks across enterprise reporting systems. Administrated artifacts, data catalogue, team standards, metadata and documentation in Confluence.
- Engineered automated data validation pipelines, anomaly detection, and regression testing to ensure consistent and trustworthy reporting for Executive level decision making; maintaining 100% on-time delivery of 9-12 annual review cycles.

- Prioritized scalable infrastructure, implementing reusable, modular dashboard templates and standardized metric definitions, driving self-service adoption and reducing ad hoc reporting by an estimated 20-30%
- Project managed org AI opportunity pipeline, leading requirements gathering and technology selection for approved use cases, and owning end-to-end development of AI chatbots and automated workflows in Microsoft Copilot Studio integrated with Microsoft Fabric
- Trained/ prepped two datasets to be ingested for the use of conversational analytics
- Delivered end-to-end Power App for Change Management Process with full SDLC process including requirements intake, mock-up design, low-code development, deployment and on-going maintenance integrated with Dataverse

Systems Analyst

2018 - 2021

- Managed full product lifecycle for 5 BI dashboards, serving as the single point of contact across stakeholders while driving requirements gathering, business case development, UAT, self-service guides and cross-functional resolution of resource, timeline, and delivery constraints
- Delivered BI solutions for the Vendor Management Office (VMO), including advanced ad hoc reporting against Oracle data warehouse, Zycus ML-sourced spend analysis, AWS data capture management, and 3 automated dashboards
- Engineered 8 end-to-end RPA automations using Automation Anywhere, owning full SDLC from process discovery and requirements documentation through development, UAT, deployment, and production support, generating 800+ hours in annual time savings and \$264K+ in combined business value across Finance, Accounting, HR, and IT Security
- Scaled RPA development capacity by establishing and leading a federated developer network of 4 certified developers, authoring code standards documentation, conducting peer code reviews, and maintaining shared resources to drive consistency and optimization across the developer community

IT Project Analyst

2017 - 2018

- Delivered data analysis for the Vendor Management Office (VMO), including advanced Excel reporting on department-wide vendor spend and CIO-level presentation decks
- Launched the Intelligent Automation Center's (IAC) RPA demand pipeline from the ground up, serving as Demand Coordinator by leading process assessments across 3 business functions and implementing the intake and pipeline tracking system
- Developed 2 SharePoint intranet sites leveraging HTML and JavaScript to serve as centralized knowledge hubs for RPA onboarding and IT service continuity resources

Core Competencies

- **Business Intelligence:**

- Tableau, Power BI, Hex, Looker; Advanced Excel, Self-Service Analytics, Visual Storytelling

- **Data Engineering:**

- SQL, Python, DAX, ETL/ELT, Data Modeling & Semantic Models, Informatica, Snowflake, Amazon Redshift, dbt, Fabric, Power Query, CI/CD,

- **Business & Strategy:**

- Power Platform, Stakeholder Management, Requirements Gathering, Executive Reporting, Data Governance, OKRs

Education

B.A., Urban Studies & Planning | Minor: Environmental Studies — UC San Diego, 2013
